2028_REC_OOPS using Java_Week 8_Q1

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Write a program to validate the email address and display suitable exceptions if there is any mistake.

Create 3 custom exception classes as below

DotException AtTheRateException DomainException

A typical email address should have a "." character, and a "@" character, and also the domain name should be valid. Valid domain names for practice be 'in', 'com', 'net', or 'biz'.

Display Invalid Dot usage, Invalid @ usage, or Invalid Domain message based on email id.

Get the email address from the user, validate the email by checking the

above-mentioned criteria, and print the validity status of the input email address.

Input Format

The first line of input contains the email to be validated.

Output Format

The output prints a Valid email address or an Invalid email address along with the suitable exception

If email ends with . or contains not exactly one . after @, it throws:

DotException: Invalid Dot usage

Invalid email address

If @ appears not exactly once, it throws:

AtTheRateException: Invalid @ usage

Invalid email address

If the part after the last dot is not among accepted domains:

DomainException: Invalid Domain

Invalid email address

If all conditions satisfied then print:

Valid email address

Refer to the sample input and output for format specifications.

Sample Test Case

Input: sample@gmail.com

Output: Valid email address

Answer

```
import java.util.Scanner;
```

```
class DotException extends Exception {  
    public DotException(String message) {  
        super(message);  
    }  
}
```

```
class AtTheRateException extends Exception {  
    public AtTheRateException(String message) {  
        super(message);  
    }  
}
```

```
class DomainException extends Exception {  
    public DomainException(String message) {  
        super(message);  
    }  
}
```

```
public class Main {  
    public static void validateEmail(String email)  
        throws DotException, AtTheRateException, DomainException {
```

```
        if (!email.contains("@") || email.indexOf('@') != email.lastIndexOf('@')) {  
            throw new AtTheRateException("Invalid @ usage");  
        }
```

```
        if (email.startsWith(".") || email.startsWith("@").||
```

```
email.endsWith(".") || email.endsWith("@")) {  
    throw new DotException("Invalid Dot usage");  
}
```

```
if (email.contains("..") || email.contains("@@")) {  
    throw new DotException("Invalid Dot usage");  
}
```

```
int atIndex = email.indexOf('@');  
int dotIndex = email.lastIndexOf('.');  
if (dotIndex < atIndex + 2 || dotIndex == email.length() - 1) {  
    throw new DotException("Invalid Dot usage");  
}
```

```
String domain = email.substring(dotIndex + 1);  
if (!(domain.equals("com") || domain.equals("in") ||  
    domain.equals("net") || domain.equals("biz"))) {  
    throw new DomainException("Invalid Domain");  
}
```

```
System.out.println("Valid email address");  
}
```

```
public static void main(String[] args) {  
    Scanner sc = new Scanner(System.in);  
    String email = sc.nextLine().trim();  
  
    try {  
        validateEmail(email);  
    } catch (DotException e) {  
        System.out.println("DotException: " + e.getMessage());  
        System.out.println("Invalid email address");  
    } catch (AtTheRateException e) {  
        System.out.println("AtTheRateException: " + e.getMessage());  
        System.out.println("Invalid email address");  
    } catch (DomainException e) {  
        System.out.println("DomainException: " + e.getMessage());  
        System.out.println("Invalid email address");  
    }  
}
```

}
}
Status : Correct

Marks : 10/10
